

Mr Lucky Matheba

Mr. Lucky Matheba is an experienced Senior Geologist with over 18 years of demonstrated success in exploration, underground, and opencast mining across platinum group metals (PGMs), chrome, coal, and base metals. He has an extensive comprehension of the entire mining value chain, encompassing greenfield exploration, resource delineation, production support, mine planning, and rehabilitation.

Mr. Matheba is highly skilled in the design and supervision of drilling programmes (core, reverse circulation, and percussion), geological and structural mapping, and the implementation of robust QA/QC systems to ensure data integrity and compliance with industry standards. He has a proven ability to deliver SAMREC-aligned resource support, geological modelling, and risk assessments that inform strategic mine planning and investment decisions.

Mr. Matheba is recognised for strong leadership and team development capabilities, including managing multidisciplinary teams, mentoring junior geologists, and coordinating contractors to achieve safe, efficient, and cost-effective operations. He is capable of integrating geological data with operational requirements to enhance grade control, increase production results, and reduce geological risk.
